

## Lab 3. Flow Notifications and Conditions

# Lab 3. Flow Notifications and Conditions

**Author:** Serge Luca, aka "Doctor Flow"

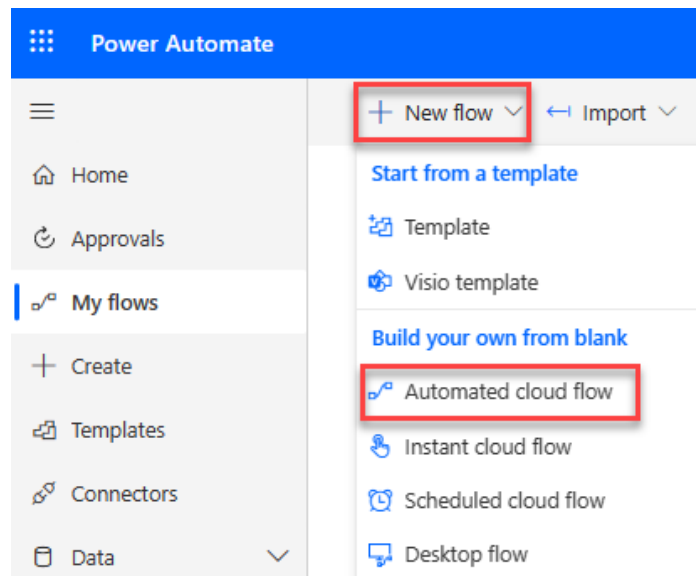

**Learning objectives:** Notifications and conditions

**Duration:** 20 minutes

**Scenario:** You have set an Out of Office notification in your e-mail box. In the Out of Office message, you will mention that if the message is urgent, people can send an e-mail containing just one exclamation point '!'. You also want to get a mobile notification when such a message shows up.

## Task 3.1: Create and test a notification flow

1. If you haven't done so, install the **Microsoft Power Automate** application on your phone and enable notifications.
2. Create a new Flow from scratch; the flow should start when your mailbox receives a new e-mail, so it must be an automated cloud flow:

3. Name the flow **important e-mail** and select the trigger **When a new e-mail arrives (v3) Office 365 Outlook**. At the time of writing, the latest version of the trigger is v3; use the most recent version if there is one. Your flow should look like this.

 When a new email arrives (V3)  

Folder

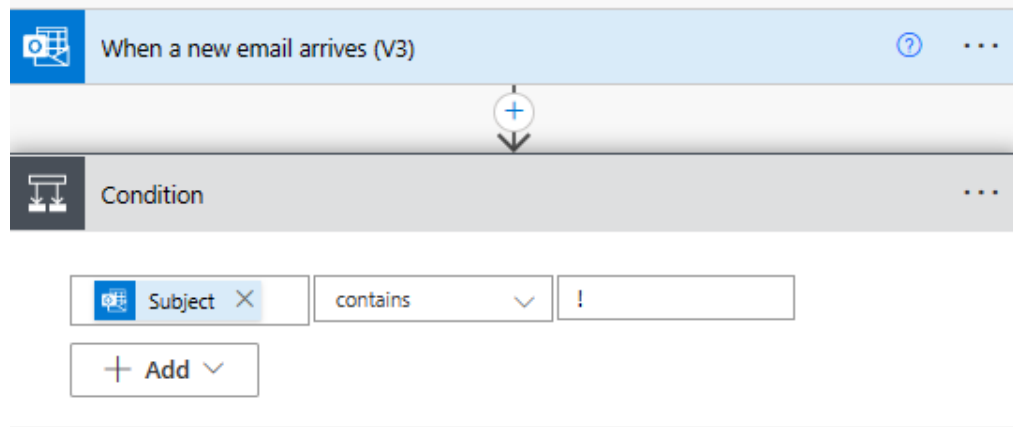

Inbox 

Show advanced options 

+ New step

Save

4. Add a condition to check if the mail subject contains !
  - a. Between the **trigger** and the **Send** action, add a **Condition control**.
  - b. On the left, **Choose a value** text box, and use the **Dynamic content** tab to select **subject** from the trigger.
  - c. In the middle text box, select the **contains** operation.
  - d. On the right, **Choose a value** text box, and type **!**

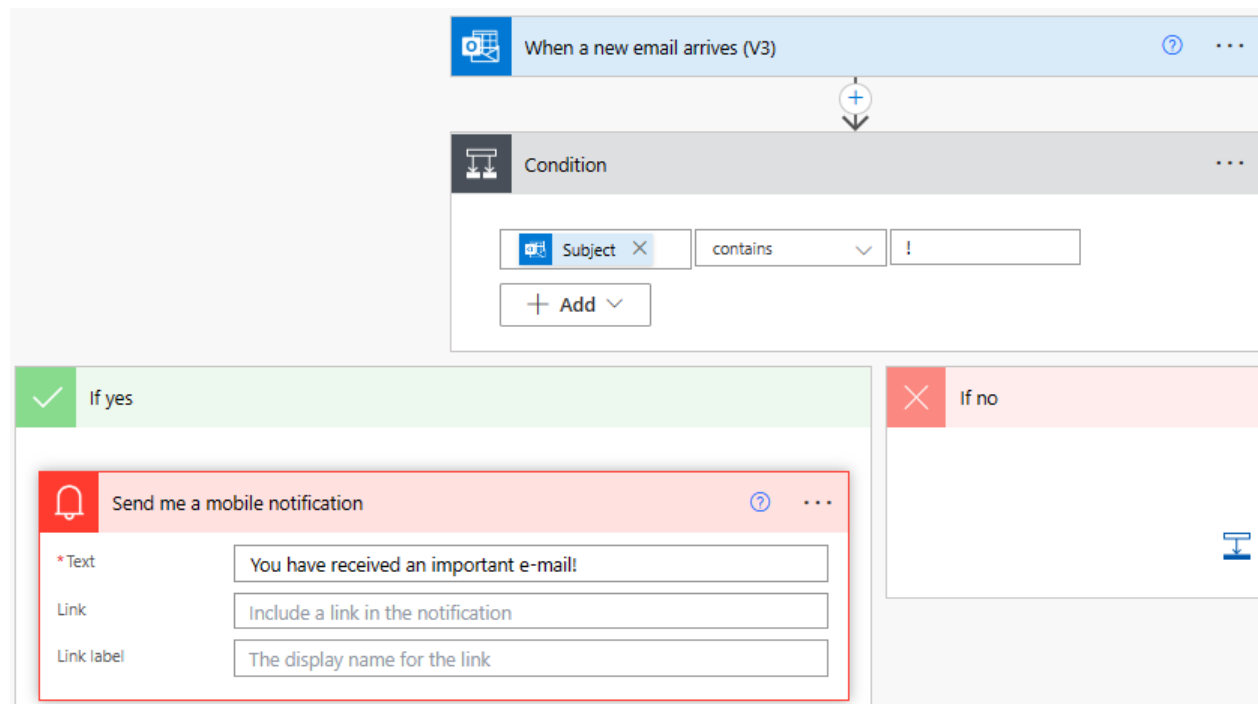

When a new email arrives (V3)

Condition

Subject X contains !

+ Add v

- e. Update the **If yes** condition by moving the **send me a mobile notification** action into it:

When a new email arrives (V3)

Condition

Subject X contains !

+ Add v

✓ If yes

✗ If no

Send me a mobile notification

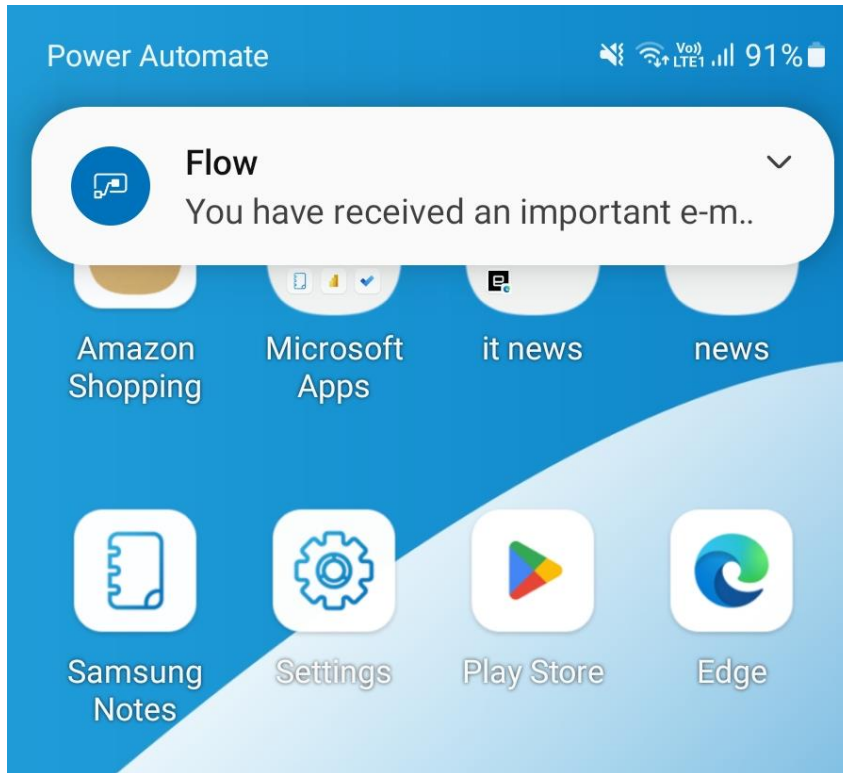

\*Text You have received an important e-mail!

Link Include a link in the notification

Link label The display name for the link

5. Test the flow by sending an e-mail to yourself with the subject **You won the lottery!**  
You get a phone notification that looks like this (in Android)

**Note:** When using your Flow mobile application, you may be prompted to enable notifications.

## Task 3.2: Filter the trigger

1. The condition can be avoided by filtering the e-mails directly in the trigger. Click the trigger and **add !** in the **Subject Filter**

 When a new email arrives (V3) ? ...

Folder	Inbox 
To	Recipient email addresses separated by semicolons (If any match, the
CC	CC recipient email addresses separated by semicolons (If any match,
To or CC	To or CC recipient email addresses separated by semicolons (If any m
From	Sender email addresses separated by semicolons (If any match, the ti
Include Attachments	No 
Subject Filter	!
Importance	Any 
Only with Attachments	No 

[Hide advanced options](#) 

2. You can remove the condition and test again. Your flow will look like this:

When a new email arrives (V3)

Folder
Inbox

To
Recipient email addresses separated by semicolons (If any match, the

CC
CC recipient email addresses separated by semicolons (If any match,

To or CC
To or CC recipient email addresses separated by semicolons (If any m

[Hide advanced options](#)

+

Send me a mobile notification

\*Text
You have received an important e-mail!

Link
Include a link in the notification

Link label
The display name for the link

This simplifies your flow; it is also essential to know that the number of flow steps your account can perform daily is limited. Preventing the flow from starting when it is unnecessary to optimize this as well.

3. You should know that more elaborate expressions can be defined in the trigger. In the trigger, click the Settings option:

When a new email arrives

Folder
Inbox

To
Recipient email addresses separated by semicolons (If any match, the trigger will run).

**Settings**

Settings for 'When a new email arrives'

**Split On**  
Enable split-on to start an instance of the workflow per item in the selected array. Each instance can also have a distinct tracking id.  
Split On ☒ On

Array Array @triggerOutputs()?['body/value']

Split-On Tracking Id

**Custom Tracking Id**  
Set the tracking id for the run. For split-on this tracking id is for the initiating request.  
Tracking Id

**Secure Inputs (Preview)**  
Secure inputs of the operation.  
Secure Inputs ☐ Off

**Secure Outputs (Preview)**  
Secure outputs of the operation and references of output properties.  
Secure Outputs ☐ Off

**Retry Policy**  
A retry policy applies to intermittent failures, characterized as HTTP status codes 408, 429, and 5xx, in addition to any connectivity exceptions. The default is an exponential interval policy set to retry 4 times.  
Type

**Concurrency Control**  
Limit number of concurrent runs of the flow, or leave it off to run as many as possible at the same time. Concurrency control changes the way new runs are queued. It cannot be undone once enabled.  
Limit ☐ Off

**Trigger Conditions**  
Specify one or more expressions which must be true for the trigger to fire.  
[+ Add](#)

Done Cancel

4. Click **Add**
5. Paste the following expression in the trigger condition textbox  
`@contains(triggerOutputs()?['body/subject'], '!')`

Settings for 'When a new email arrives'

Split On

Enable split-on to start an instance of the workflow per item in the selected array. Each instance can also have a distinct tracking id.

Cancel

(You will become more familiar with expressions in the following labs).

6. **Remove the Subject Filter** you defined before
7. **Save your flow** and test it again.
8. **If your test succeeds, don't forget to turn this flow off :**
  - a. Click the arrow:

b. On the flow pane, click the **Turn off** button:
